SOFTWARE SYNTHESIS

KONTAKT Software Sampler

KONTAKT fuses an innovative design with an advanced sampling engine resulting in an inspiringly fast and intuitively flexible sampler with exceptional sound quality. In addition to standard sample playback and manipulation abilities, **KONTAKT** adds several technologies to give sampling a new dimension. Features include: • Realtime granular time-stretching and resynthesis engine • Three modes of playback: Classic Mode, Time Machine mode for real-time manipulation of length, pitch, and formant and

Tone Machine mode which imprints a playable pitch onto the sample and maintains the same length across the keyboard. • Up to 256 stereo voices • Graphical display • Up to 128 velocity layers • Integrated EQ, delay, reverb, and waveshaper effects • Adaptive GUI shows only the active parameters • 17 different filter types • Unique tempo-synced step-modulators, LFOs, and multi-stage envelopes • Integrated loop editor with waveform display • Support for 8 loop points • Includes more than 3 gigabytes of professional license-free samples ranging from acoustic pianos, drums and percussion, basses and guitars, to vintage instruments • Supports AKAI™ S-1000/S-3000, Gigasampler™*, SF2™, BATTERY™, REAKTOR™ Map, LM4™, AIFF and WAV sample formats • VST® 2.0, DXi™, DirectConnect™, MAS™, ASIO™, DirectSound™, MME™, SoundManager™, FreeMIDI™, OMS™ interfaces supported. List price: ~~\$399~~

BATTERY Drum Sampler Plug-in

A sampler designed for the unique demands of percussion programming and performance, **Battery** is compatible with virtually all professional-level digital audio recording programs, such as Cubase, Pro Tools, Sonar, Digital Performer, Logic, etc. It is fast, effective, intelligent and convenient. Features include: • Sampler designed for drum and pitched sounds • Internal 32-bit resolution and sample-accurate timing • Supports AKAI S-1000™, SF2™, REAKTOR Map, LM4™, AIFF and WAV sample formats •

More than 20 high-quality drumkits included • 54 instruments, each with 128 velocity layers, tuning, volume envelope, pitch envelope, bit reduction, shaper and FX Loop for innovative effects • Six modulation inputs per instrument with many drum-oriented presets • Realtime wave display • Runs stand-alone with MME™, Direct Sound™, Sound Manager™, MAS™, DirectConnect™ and ASIO™ or as a Dxi™ and VST 2™-Plugin • Can be played and modulated via MIDI with complete VST automation. List price: ~~\$199~~

B4 Virtual Organ Instrument

The **B4** completely captures the sound of the classic B3 organ including rotating speakers. The flexibility of advanced software modeling makes a new degree of realism possible. Unlike a sample-based instrument, the **B4** accurately models such subtle details as harmonic foldback, drawbar crosstalk and loudness robbing. The result is a warm and powerful sound, complete with the subtle tonal shades that improve both playability and musicality. Tonewheels have never been this portable or this affordable. Features include: • 91 tonewheels

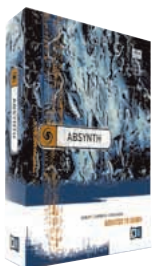

• 9 drawbars per manual • 2 manuals and pedal keyboard • Scanner vibrato/chorus • Percussion on any harmonic • Adjustable keyclick • "Back panel" control • Tube distortion sound • Rotary speaker • Use the **B4** to process other sounds as a VST Insert Effect • Apply any combination of Scanner Vibrato, Tube Overdrive and Rotating Speaker effect to your audio tracks • Software extension allows the exchange of the 91 Tonewheels and the transformation of the B4 into a Vox Continental, Farsifa or an Indian Harmonium • Tonewheel-Sets permit the master-tuning to be altered, and to "age" the sound in six different levels, from "well matured" to "far beyond repair" • Stand alone or VST, MAS, DirectX, DirectConnect plug-in use. List price: ~~\$285~~

REAKTOR 4 Synth/Sampler Plug-in

A complete sound design studio with almost endless possibilities for producing and performing music, **REAKTOR** allows musicians and engineers design and build their own instruments, samplers, effects, and sound design tools. High quality signal processing algorithms and the 32-bit floating point precision of **REAKTOR's** audio engine guarantees sound quality that meets the highest demands. **REAKTOR** provides more than 200 basic modules which are the source

material for creating sound generators and effect-processors. Numerous "analog" and sampling oscillators, various filters and envelopes, shapers, delays, sequencers and much more. The user can interconnect all the modules freely in the structure window. All instruments can be modified freely, and building instruments from scratch is possible. Features include: • Reworked snapshot manager can generate random patches, and can morph between any two patches to create smooth sound transitions • Instruments, macros, modules, and samples can be imported via drag & drop from the convenient integrated browser • Graphical sample mapping that allows velocity splits and 32-bit sample support for maximum flexibility and sound quality • Minimal latency • Precise MIDI timing • Analog modelled, additive, FM, and unique synthesizers • Real-time time compression and expansion • Up to 6 channels of surround sound • Supports VST, MAS, DirectConnect • Runs stand-alone or as a plug-in on Windows, Mac OS 9 and OS X. List price: ~~\$499~~

ABSYNTH Virtual Synth

With **ABSYNTH** you can create everything from timbrally morphing percussive loops to physical modeling textures to time-evolving soundscapes. Any parameter adjusted in **ABSYNTH** is immediately heard without clicks or glitches. Features include: • Subtractive, FM and Ring Modulation synthesis methods • 6 oscillators, 4 filters, 3 ring modulators, waveshaper and delay processor per voice • Freely drawable waveforms for oscillators, LFOs and waveshaping • Exceptional wide range of organic and expressive sounds

• Extensive sound library • Multitimbral in VST 2.0 with 8 parts • Intuitive and convenient graphical editors • Runs stand-alone and as a plug-in • Supports VST® 2.0, DirectConnect™, MAS™, ASIO™. List price: ~~\$299~~

TRAKTOR

Virtual DJ Software For Mac and PC

TRAKTOR brings professional DJ mixing to your computer, unifying listening, interaction, mixing and composition. The modular concept of **TRAKTOR** integrates two high-quality players with a convenient playlist section, DJ mixer, beat matcher, digital scratcher, cue section and filters. The innovative parametric control of the software makes it possible to record all control movements and export a mix in

a dedicated file format. Features include: • Dual deck MP3, WAV and Audio-CD player • Interactive waveform display • Sample-accurate cue points • Pitching ± 35% • Scratching • Seek mode • Reverse play • Dedicated control file format for recording and editing a mix without replicating the audio material • Fully automated tempo and beat matching • Loops with selectable multiples of bars can be set on the fly • Auto-fade function with adjustable time • Crossfader with selectable sensitivity • Punch-in • Boost and mute buttons • 3-band EQ with kill switches per band for each deck • 8-pole bandpass/notch filter with variable width, resonance and cutoff frequency for each deck • Separate headphones monitor output supporting multichannel, 3D and secondary soundcards or 2 mono outputs on a single soundcard • MIDI control over all relevant panel elements • Full automation of functions and actions • Export mixes as WAV or AIFF files. List price: ~~\$199~~
